

Ideation Phase

Define the Problem Statements

Date	10 July 2026
Team ID	
Project Name	Virtual Agent–Driven SLA Breach Awareness & Justification System
Maximum Marks	2 Marks

Customer Problem Statement Template:

The Customer Problem Statement helps identify the challenges faced by IT service desk agents, incident managers, and support teams in managing Service Level Agreements (SLAs). In this project, the focus is on understanding the difficulties of manually monitoring SLA progress, identifying incidents that are at risk of breaching their SLA, and collecting justifications for SLA violations. By understanding these challenges from the users' perspective, the team can design an automated ServiceNow solution that improves SLA monitoring, sends timely notifications, enables Virtual Agent interaction, and provides real-time reports and dashboards. This customer-centric approach ensures the proposed solution addresses real operational problems while improving service quality, efficiency, and customer satisfaction.

I am	Describe customer with 3-4 key characteristics - who are they?	Describe the customer and their attributes here
I'm trying to	List their outcome or "job" the care about - what are they trying to achieve?	List the thing they are trying to achieve here
but	Describe what problems or barriers stand in the way - what bothers them most?	Describe the problems or barriers that get in the way here
because	Enter the "root cause" of why the problem or barrier exists - what needs to be solved?	Describe the reason the problems or barriers exist
which makes me feel	Describe the emotions from the customer's point of view - how does it impact them emotionally?	Describe the emotions the result from experiencing the problems or barriers

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	I am an IT Service Desk Agent responsible for managing and resolving incidents within the agreed Service Level Agreements (SLAs).	I am trying to monitor incident SLAs, receive timely alerts before SLA breaches, and provide proper justification for delayed incident resolution.	The current process requires manual monitoring of SLA timelines, making it difficult to identify incidents that are approaching their SLA limits.	There is no automated system to detect SLA risks, send notifications, or collect standardized SLA breach justifications.	I feel stressed and concerned because missed SLA deadlines can reduce service quality, increase customer complaints, and affect overall team performance.
PS-2	I am an Incident Manager responsible for monitoring SLA compliance and improving service performance.	I am trying to track SLA breaches, analyze breach reasons, and ensure support teams respond before incidents violate their SLA commitments.	Existing reporting and monitoring require manual effort, making it difficult to obtain real-time visibility into SLA performance.	There is no centralized solution to automate SLA monitoring, notifications, Virtual Agent interactions, and performance reporting.	I feel frustrated because delayed visibility into SLA performance makes it difficult to improve operational efficiency and maintain customer satisfaction.
