

SCENARIO

An incident is raised in ServiceNow and monitored against SLA. When SLA is at risk of breach or breached, the assigned user is notified and provides justification through the Virtual Agent.

VIRTUAL AGENT-DRIVEN SLA BREACH AWARENESS & JUSTIFICATION SYSTEM

User Journey Map

Based on user research and process observations of the IT Service Management workflow.

Steps	1. Incident Creation	2. SLA Attachment & Monitoring	3. SLA At Risk Detection	4. Notification to Assigned User	5. Interaction with Virtual Agent	6. SLA Breach Justification	Manager Review Reporting	Continuous Improvement
INTERACTIONS What interactions do they have at each step along the way?	User raises a new incident in ServiceNow.	System attaches appropriate SLA to the incident and starts monitoring.	System checks SLA progress and identifies incidents at risk of breach.	Email notification is triggered to the assigned user.	User interacts with the Virtual Agent for guidance and justification.	User provides SLA breach justification through the Virtual Agent.	Managers review SLA status in reports and dashboards.	Insights are used to improve SLA processes and performance.
THINGS / PLACES / PEOPLE What digital touchpoints or physical objects would they use? Where are they? Who do they see or talk to?	• ServiceNow Portal • Incident Form • End User / Requester	• SLA Definitions • SLA Engine • Incident Record • System	• SLA Rules • Threshold Conditions • System	• Email • Notification Rules • Flow Designer • Assigned User	• Virtual Agent • Chat Interface • Knowledge Base	• Justification Form • Virtual Agent • Incident Record	• Reports • Dashboards • Manager / Supervisor	• Analytics • Performance Data • Management Team
GOALS & MOTIVATIONS At each step, what is a person's primary goal or motivation?	Help me report an issue quickly and accurately.	Help me ensure the right SLA is applied and monitored.	Help me identify potential SLA breaches early.	Help me inform the assigned user proactively.	Help me provide quick assistance and guidance.	Help me capture the reason for potential SLA breach.	Help me monitor SLA performance and compliance.	Help me improve service quality and reduce SLA violations.
POSITIVE MOMENTS What steps are enjoyable, productive, or motivating?	Easy and quick incident submission.	Automatic SLA attachment without manual effort.	Early visibility of at-risk incidents is helpful.	Timely alerts help take action before breach.	Virtual Agent provides instant support.	Simple and guided justification capture.	Clear dashboards provide valuable insights.	Better decisions lead to improved service quality.
NEGATIVE MOMENTS What steps are frustrating, confusing, angering, costly, or time-consuming?	Incomplete or incorrect incident information.	Wrong SLA attached due to incorrect configuration.	High number of at-risk incidents may cause confusion.	Users may ignore or miss important notifications.	Users may not understand Virtual Agent responses.	Justification may be incomplete or unclear.	Data may be overloaded or difficult to interpret.	Lack of follow-up on insights may not improve performance.
AREAS OF OPPORTUNITY How might we make each step better?	Provide clear forms and validation.	Improve SLA mapping and automation rules.	Use intelligent thresholds and predictive alerts.	Enhance notification visibility and reminders.	Improve intents and response accuracy.	Use structured forms with mandatory fields.	Provide customizable reports and real-time dashboards.	Use analytics for continuous process improvement.
Incident Created → SLA Attached → SLA Monitored → SLA At Risk Detected → Notification Sent → Virtual Agent Interaction → Justification Submitted → Manager Reviewed → Insights for Improvement								

Outcome: Proactive SLA monitoring, timely notifications, guided justification, and actionable insights for better service delivery and SLA compliance.
