

Project Design Phase
Problem – Solution Fit

Date	10 July 2026
Team ID	
Project Name	Virtual Agent–Driven SLA Breach Awareness & Justification System
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The **Problem–Solution Fit** for the **Virtual Agent–Driven SLA Breach Awareness & Justification System** focuses on identifying the operational challenges faced by Service Desk teams in monitoring Service Level Agreements (SLAs) and ensuring that the proposed ServiceNow-based solution effectively addresses those challenges. The system proactively tracks SLA progress, identifies incidents approaching SLA breach, automatically notifies support agents, and collects breach justifications through a Virtual Agent. This ensures timely incident resolution, improves SLA compliance, enhances customer satisfaction, and reduces manual effort in incident management.

Purpose:

- ☐ Automatically monitor SLA progress and identify incidents that are approaching SLA breach.
- ☐ Reduce manual monitoring by providing proactive alerts and notifications to support teams.
- ☐ Improve incident resolution efficiency by enabling timely actions before SLA violations occur.
- ☐ Collect SLA breach justifications automatically through the Virtual Agent to ensure proper documentation and compliance.
- ☐ Provide managers with accurate dashboards and reports for monitoring SLA performance and improving service quality.
- ☐ Enhance customer satisfaction by reducing SLA breaches and ensuring faster incident resolution through intelligent automation.
