

Project Design Phase Solution Architecture

Date	10 July 2026
Team ID	
Project Name	Virtual Agent-Driven SLA Breach Awareness & Justification System
Maximum Marks	4 Marks

Solution Architecture:

The **Virtual Agent-Driven SLA Breach Awareness & Justification System** is designed on the ServiceNow platform to automate Service Level Agreement (SLA) monitoring, breach prediction, stakeholder notifications, justification collection, and reporting. The architecture integrates ServiceNow Incident Management, SLA Engine, Flow Designer, Virtual Agent, Email Notifications, Reporting, and Dashboards to provide proactive SLA management.

- Automate SLA monitoring for Incident records.
- Detect SLA breaches before deadlines are missed.
- Trigger notifications through Email and Virtual Agent.
- Collect SLA breach reasons from assigned users.
- Store SLA justification for future auditing.
- Improve SLA compliance and customer satisfaction.
- Provide real-time dashboards and analytical reports.
